How to choose - Screens

The increasing growth of open plan offices and call centres has made screens ever more popular. Screens reduce optical distractions and disruptive noises. They are the essential feature in contemporary office planning.

Area Partition

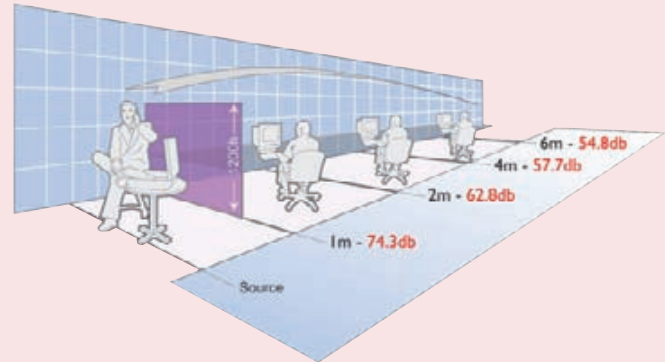

Floor standing screens can separate departments, groups and provide individual isolation where required. Desktop screens divide a space in a more personal sense whilst still enabling group interaction.

Restriction of Optical Field

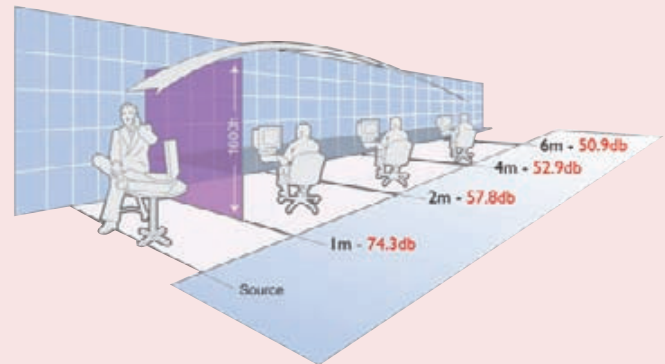

Restricting the field of vision eliminates optical distraction, enabling maximum efficiency. Screens are available in various heights and widths to create the right degree of visual privacy for the individual.

Audio Reduction

As well as visual distraction, screens can absorb acoustic distraction. The closer the screen is to the source of any noise, the greater the acoustic efficiency.
